

## HTML Comment Tag

- HTML comments are not displayed in the browser, but they can help document your HTML source code.
- You can add comments to your HTML source code by using the following syntax:
- `<!-- Write your comments here -->`
- Notice that there is an exclamation point (!) in the start tag, but not in the end tag.
- With comments you can place notifications and reminders in your HTML code.
- Hide Content : Comments can be used to hide content.
- Which can be helpful if you hide content temporarily

### For example:

```
<p>This is a paragraph.</p>  
<!-- <p>This is another paragraph </p> -->  
<p>This is a paragraph too.</p>
```

- Comments can be used to hide parts in the middle of the HTML code.

### For Example, Hide a part of a paragraph:

```
<p>This <!-- great text --> is a paragraph.</p>
```

## How to View HTML Source?

- Have you ever seen a Web page and wondered "Hey! How did they do that?"
- Right-click in an HTML page and select "View Page Source" (in Chrome) or "View Source" (in Edge), or similar in other browsers. This will open a window containing the HTML source code of the page.

## Inspect an HTML Element:

- Right-click on an element (or a blank area), and choose "Inspect" or "Inspect Element" to see what elements are made up of (you will see both the HTML and the CSS). You can also edit the HTML or CSS on-the-fly in the Elements or Styles panel that opens.
